

Makita **9227CB**

(Rotary Sander/Polisher)

The **Makita 9227CB** isn't the preferred rotary sander/polisher for Aerospace cleaning professionals by accident. It's robust make-up, bow-handle design and variable speed control make it suitable for a host of applications, from heavy-duty and frequent use in sanding/restoring brightwork, to lighter polishing applications such as removal of oxidation or simple buffing of painted surfaces.

It's small enough to be lightweight and portable, yet powerful enough for professional use at the highest level. It's quick-release head system means you can turn it from a polisher to a sander and back again in just seconds, minimising delays to your working processes.

The Makita 9227CB offers the user incredible flexibility. With the standard 180mm flex plate attached this machine can be used as a top-end rotary polisher, allowing the user total control in detailed polishing and compounding applications. With the 165mm flex plate attached, this machine can be used with Abralon® and/or MicroMesh® sanding discs and Kangaroo® (metal lubrication) Oil, allowing the user to safely and accurately prepare metal surfaces, removing only microscopic amounts of metal before undertaking polishing.

Fraser's Aerospace stock all of the accessories mentioned above – for details on the 165mm flex plate, Abralon® discs, MicroMesh®, Kangaroo® Oil and 200mm Lambs wool polishing bonnets, visit us at www.frasersaerospace.com or call us on +44 (0)20 8597 8781.

We also offer a range of training courses, aimed at helping you achieve the best possible results when using our cleaning chemicals and machinery. For details, visit our website or email contact@alex-fraser.co.uk.

FEATURES

- Lightweight and robust
- Variable Speed Control (0 – 3,000 rpm)
- Preset Speed Settings (600 – 3,000 rpm)
- Electronic speed control (to maintain a constant speed)
- Interchangeable heads
- 180mm Velcro/Hook and Loop 'flex plate' included
- 200mm Lambs-wool polishing bonnet included
