SUBJECT: Restrictions for Exterior Finishes

1. EFFECTIVITY

SR20 Serials 1005 and subs
SR22 Serials 0002 and subs
SR22T Serials 0001 and subs

2. DESCRIPTION

Vinyl exterior wraps are not approved and may not be installed on the aircraft. Wraps can compromise functionality of airframe lightning protection, adversely impact static dissipation provisions, and potentially affect flight control surfaces if wrap becomes detached in flight. Wraps may also affect the ability of CAPS to deploy in an emergency.

Note: Striping kits, registrations markings, and decals are not considered wraps.

Ceramic coatings are not approved and should not be used on exterior surfaces as it could interfere with static dissipation.

Exterior finish restrictions will be incorporated in an upcoming revision to the Airplane Maintenance Manual.
